Radiology of Indiana proudly serves central Indiana and today we are excited to be one of the largest private practice radiology groups in the country. Our size and subspecialty depth ensure that patient exams will be interpreted by the appropriate, subspecialty-trained radiologist.

Our board certified, fellowship trained radiologists provide subspecialty care in all imaging disciplines, including mammography, neuroradiology, musculoskeletal, body imaging, nuclear medicine, and interventional radiology.

Radiology of Indiana provides on-site, professional interpretations 24 hours a day, 365 days a year. Our radiologists are a quality-driven group that work closely with our referring physicians and clinical partners to provide timely and accurate interpretations, while never losing site of the goal of helping to improve patient outcomes.

The health care environment demands that all providers of health-related services offer patients value and quality. These two traits represent everything Radiology of Indiana does. Radiology of Indiana will continue to work in the spirit of partnership with our referring physicians and clinical partners to ensure that our patients remain at the forefront of everything we do.

MISSION

The mission of Radiology of Indiana is to maintain and enhance exceptional radiology services for our patients, referring physicians and hospital partners.

We will fulfill this mission by:

- Stay at the clinical forefront as providers of radiological services and intervention, being committed to continuing education and internal quality improvement and peer review for our physicians, and by providing excellence in radiological services and consultation.
- Maintain the highest ethical and professional standards, encouraging continual personal and organizational improvement of our physicians.
- Provide referring physicians with clear, concise interpretations and readily available consultations.
- Provide timely access to imaging services and their interpretation.
- Collaborate with our referring physicians to provide the most appropriate imaging studies for our patients, reducing radiation exposure and inappropriate exams.
- Work with our facilities to ensure highest quality and accredited equipment and imaging protocols.
- Work with our technologists and support staff to ensure appropriate training, certification and licensure.

VALUES

- Patient centered compassionate high-quality care.
- Practice that exceeds patient, referring physician and hospital expectations.
- Dedication, integrity, excellence.
- Committed to lifelong learning and continuous quality monitoring and improvement.
- Innovation and optimal utilization of technological advancements for continuous process improvement.
- Democratic governance, teamwork and decision-making, and a respect of others embracing individual knowledge, creativity and talent.
