

Small Bowel Follow-Through (SBFT) Protocol

- Take Scout (if there is no contrast in the bowel then you may proceed)
- Have patient drink 300mL Isovue 300M or inject through NG, if able
- Image after all contrast is ingested
- Perform 3-hour follow-up
- If contrast has not reached the cecum after 3 hours, image at 6 hours.
- Complete after 6-hour image and get additional KUB the next day, if requested by radiologist
